WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Loop round the float: 380 circumference, sewn into a ring with a bar tack

Release tab: 80 of webbing folded and sewn to the ring, with a 15 loop at its end

The release unit's pin passes through the tab loop

The float's line is tied to the float only, never to the sling or the aircraft

Check: with the pin pulled the sling drops clear under the float's weight
